What's important in a field monitor? (in our opinion)

Resolution

First and foremost, the ultimate purpose of a field monitor is to be able to **see what you are shooting**. Shooting in HD and monitoring in SD is, we feel, a step in the wrong direction. That's why even with a 5.6 inch screen, the DP6 delivers HD at **1280x800 resolution, making it the smallest HD monitor available**. Simply put this means you truly see what you get, so there are no surprises in the editing room.

Wide range of inputs

No matter how good a monitor is, if your camera doesn't work with it then it probably won't be very helpful to you. That's why all the standard HD inputs—HDMI, Component and HD/SDI are available on the DP6.

Specifications

| | |
|--------------------|---------------------------------------|
| Display Area | ▸ 5.6" Diagonal |
| Resolution | ▸ 1280x800 NATIVE |
| Pixel Pitch | ▸ 94.5(H) × 94.5(V) |
| Display Technology | ▸ IPS - Normally Black |
| Viewing Angle | ▸ 160 U/D/L/R |
| Brightness | ▸ 300 cd/m2 |
| Contrast Ratio | ▸ 500:1 |
| Response Time | ▸ 30ms |
| Inputs | ▸ 3G/HD/SDI* ▸ HDMI ▸ Component |

Durable + Lightweight

Shooting on location often means rough conditions and packing light, two things that can take a toll on lesser-equipped... equipment. This in mind, rather than the industry-standard injection-molded plastic or bent sheet metal we chose to give the DP6 a **solid, milled aluminum shell**, making the unit both lightweight and extremely strong.

Results-oriented features

Auto aspect ratio detection to deal with any signal type, a **highly accurate focus assist**, preset and **customizable image scaling, full RGB color controls, 1:1 pixel mapping** - A lot of effort has gone into making sure these features are not simply buzz-words to cross off a list, but ones that truly improve workflow.

Easy-to-use menus

Having a monitor that is very capable can easily be soured if the user interface leaves much to be desired. With the DP6 we have spent a lot of time creating a menu and button system that work quickly and in a way that makes sense, with influence from the DSLR-style scroll wheel interface. With the addition of a customizable preset button, **the features you use most are the ones you will never have to dig around for.**

Powering options

Buying new equipment can often be a hassle when it doesn't want to play nice with the gear you already own. We have worked hard to ensure a number of options are available to make this a non-issue for the DP6, **such as a 5D/7D battery plate**, a D-Tap cable and a standard **7-18v input** range on the monitor itself (with yet more options in the works) to alleviate any potential powering woes.

Future-proof

That sinking feeling when you purchase a high-end piece of electronics that gets an update the next day? We don't like it either, so we decided to stick a USB port on the DP6 and include a 2GB flash drive with every order meaning it is **field-updatable, so**

▶ Composite

▶ USB

▶ IR Port

Outputs

▶ HDSDI (Loop Through)*

Dimensions

▶ 4x6x1 Inches

Weight

▶ 14oz (SDI)

▶ 12oz (HDMI)

Power Consumption

▶ 6 Watts (HDMI)

▶ 8 Watts (SDI)

Mounting Points

▶ 4 x 1/4-20

▶ 4 x #6-32

Construction

▶ Solid Aluminum

*On DP6-SDI Version Only

whenever we have updated firmware, you'll have it too.

Production-friendly accessories

Every production comes with a unique set of needs, and we've made sure to accommodate for as many of those as possible with a range of innovative and useful accessories such as the click-in neoprene Sunhood, HDMI splitter, and snap-on acrylic screen protector.
